

FH231 Series Fuel Pro[®] Diesel Fuel Filtration Systems

Self-Priming Port
Remove the cap, pour in fuel and restart the engine with clean "filtered" fuel

Filter Element
Patented design for extended life and maximum filtration performance

Clear Cover
See when NOT to change the filter

Check Valve
Eliminates Drain-back

Drain Valve

Lightweight Aluminum Construction

Non-Directional Coolant Ports

Genuine Filtration Solution

Developed to extend service intervals through increased filter capacity, the Fleetguard FH231 Series Fuel Pro[®] combats the severe challenges of water in diesel fuel commonly facing operators of 10-18L diesel engine equipment today. The FH231 Series Fuel Pro uses a Fleetguard Elemax[®] fuel filter element (FS19915) to prevent fuel system problems and engine damage through superior filtration.

Eliminate Unnecessary Maintenance

This all-in-one fuel filter/water separator and fuel heater was designed for maximum usability. The clear cover provides instant visual indication of filter life through the patented "Seeing is Believing[®]" technology so you can know when it is and when it is not time to change the filter. The Fleetguard FS19915 filter element, featuring patented Elemax[®] technology, enables extended service intervals and increased performance due to its larger size. The FH231 Fuel Pro is also biodiesel B20 compatible.

Five Minute Filter Changes

Fleetguard FH231 Series Fuel Pro allows for environmentally friendly, dry filter changes unlike standard fuel filters which can spill fuel during removal. Simply drain the fuel below the service collar, remove the collar with a Fleetguard wrench (SP1076) or common tool, and replace the old element with a new one. The check valve eliminates drain-back during filter changes and a simple priming port enables easier engine start-up

Optional Performance

- Base Model — Unheated with Coolant Heat Ports
- Electric Heat
 - 12VDC or 24VDC Pre-heater
 - 120VAC Overnight heater
- Water-In-Fuel (WIF) sensor
